

Nguyễn Tuấn Anh

Software Engineer

Phone: (+84) 915612706

Address: Binh Tri Dong Ward, Ho Chi Minh City, Vietnam

Email: tuanh.dev2000@gmail.com

LinkedIn: <https://www.linkedin.com/in/tuananhnguyen-work/>

Summary

Backend Software Developer with around 4 years of experience in building enterprise applications, mainly using Java, Spring Boot, PostgreSQL, Redis, microservices, and cloud-related technologies. Experienced in insurance, consumer finance, sales management, customer loyalty, and project management domains.

Strong hands-on experience in developing RESTful APIs, designing database logic, integrating third-party and internal systems, troubleshooting production issues, and supporting system stability. Able to work directly with Product Owners to clarify requirements, analyze business flows, and deliver features in Agile/Scrum environments.

Education

Saigon University

The Degree of Engineer in Information Technology

Major: Information Technology

Degree Classification: Good

Graduation Date: July 2023

Location: Ho Chi Minh City, Vietnam

Technical Skills

- Backend: Java, Spring Boot, Spring JPA, Spring Security, RESTful API, Microservices, JWT, Swagger, Maven
 - Frontend: Angular 14, TypeScript
 - Database and Cache: PostgreSQL, MongoDB, Redis, ElasticSearch
 - Messaging: RabbitMQ
 - Devops/Cloud/Infrastructure: AWS EC2, AWS S3, Kubernetes
 - Tools & Methodologies: Git, Git Flow, JIRA, Confluence, SonarQube, Agile/Scrum, Kanban
-

Work Experience

ITC Group

Full-stack / Backend Developer

July 2022 – Present

Project: Sales & Loan Management Platform

July 2024 - Present

Project Description:

A sales and loan management application for one of the leading consumer finance companies in Vietnam. The system supports sales operations, loan package management, loan creation workflows, and business processes for products such as consumer loans, two-wheeler loans, shopping loans, and insurance-related products.

Role

Backend Developer

What I have done

- Developed backend features for managing sales activities, loan packages, and loan creation workflows.
- Implemented 50+ RESTful APIs, 5 new modules, database logic, and business workflow processing.
- Integrated the system with third-party applications and internal applications.
- Built new modules to support new business flows, including receiving leads from external partners, managing sales accounts, and Code of Conduct management.
- Developed features related to request management, user confirmation, request history, status lifecycle, and business validation.
- Investigated issues, analyzed root causes, and supported production stability.
- Supported UAT and production issue fixing when required.

Skills / Tech Stack

- **Backend:** Java, Spring Boot, Spring JPA, Spring Security, Microservices, RESTful API
 - **Messaging:** RabbitMQ
 - **Database & Cache:** PostgreSQL, Redis
 - **Tools:** JIRA, Confluence, Agile/Scrum
-

Project: Test Case Management

Feb 2024 - July 2024

Project Description

A test management platform used to manage test cases, organize test runs, generate reports for each run, and visualize testing results through dashboards and reports.

Role

Full-stack Software Engineer

What I have done

- Worked as a Full-stack Software Engineer in a test case and test run management project.
- Developed new features for test case management, test run management, reporting, and dashboard visualization.
- Implemented features such as test case / test run tree view, importing test cases from templates, and dashboard modules.
- Developed features from frontend to backend, including UI implementation, API development, database logic, and integration.
- Participated in UAT and production deployment activities.
- Integrated the system with third-party platforms such as Jira Marketplace apps.
- Facilitated Agile/Scrum processes by hosting sprint meetings and successfully onboarded/mentored 3 new team members, accelerating their time-to-productivity.

Skills / Tech Stack

- **Frontend:** Monorepo, Angular 15, TypeScript, ELF, RxJS, TailwindCSS, Material UI, HTML, Linter
 - **Backend:** Microservices, Kong Gateway, Java, Spring Boot, Spring JPA, Spring Security, Spring Cloud, JWT, Swagger
 - **Database & Cache:** PostgreSQL, Redis
 - **Devops/Cloud/Infrastructure:** AWS EC2, AWS S3, Kubernetes
-

Project: Insurance Packages/Plans Comparison (Onsite)

Aug 2023 - Feb 2024

Project Description

A white-labeled insurance platform tailored for distribution partners, helping customers compare and select suitable insurance packages with flexibility and embedded insurance at the point of sale.

Role

Backend Developer

What I have done

- Reviewed and validated business requirements.

- Participated in feature identification, analysis, integration, and verification testing.
- Developed backend features including APIs, database logic, third-party integrations, customer management, and quotation comparison.
- Worked with microservice-based backend services.
- Analyzed root causes, investigated issues, and supported production stability.

Skills / Tech Stack

- **Backend:** Java, Spring Boot, Spring JPA, Spring Security, Microservices, RESTful API
 - **Messaging:** RabbitMQ
 - **Database & Cache:** PostgreSQL, Redis
 - **Tools:** JIRA, Confluence, Agile/Scrum
-

Project: Smart Insurance Platform

Oct 2022 - May 2023

Project Description

A smart insurance solution that applies digital transformation and modern technologies to manage customer information, support purchasing decisions, and provide 24/7 customer support. The platform helps users access tailor-made insurance products based on customer demand analysis.

Role

Full-stack Developer

What I have done

- Worked as a Full-stack Developer in an Agile/Scrum team.
- Communicated directly with Product Owner to clarify requirements and discuss solutions with the development team.
- Investigated and analyzed business requirements.
- Implemented backend APIs and web portal features.
- Supported production issue investigation, troubleshooting, and hotfixes.
- Provided daily progress reports.

Skills / Tech Stack

- **Frontend/Mobile:** React, React Native, TypeScript, Redux, Redux Thunk, Angular 14
 - **Backend:** Java, Spring Boot, Spring JPA, Spring Security, JWT, Swagger
 - **Database & Messaging:** PostgreSQL, MongoDB, RabbitMQ, Redis, ElasticSearch
 - **DevOps/Cloud:** AWS, Docker, Kubernetes
 - **Others:** Git Flow, Agile/Scrum
-

Project: Customer Loyalty App

July 2022 - Oct 2022

Project Description

A loyalty platform that helps enterprises manage customer loyalty programs, including points, ranking, and gift redemption. The system provides a consistent, easy-to-use, platform-independent, and business-agnostic loyalty solution for B2C customers.

Role

Full-stack Developer / Feature Owner

What I have done

- Worked as a Full-stack Developer and feature owner.
- Designed, developed, and collected detailed requirements with the Product Owner.
- Participated in planning and review meetings with PO.
- Implemented loyalty features related to points, ranking, and gift redemption.
- Built and maintained backend APIs and frontend features.

Skills / Tech Stack

- **Backend:** Java, Spring Boot, Spring JPA, RESTful API, Maven
- **Frontend:** TypeScript, React, Redux, HTML, SCSS
- **Database & Search:** PostgreSQL, Elasticsearch, Redis
- **Messaging:** RabbitMQ
- **Server & DevOps:** Tomcat, Nginx, Docker, Docker Swarm
- **Infrastructure:** AWS EC2, AWS S3
- **Tools:** Git, UpDiagram, SonarQube, Agile/Scrum
